

Lucky Dogs

Required Vaccines

After the initial series, your dog will still need periodic boosters, with the frequency being determined by your veterinarian and based on your dog's age, lifestyle, and other risk factors. If your dog is due for a booster, it should ideally be done at least 3 weeks before their stay at Lucky Dogs to allow them to build up the best immunity prior to visiting. Each required vaccination noted below is followed by examples of the typical stickers you'll find in your pet's vaccination passport.

1) Rabies (REQUIRED)

The rabies vaccine is mandated by Luxembourgish law and required every 2 years.

2) Combination Vaccines (REQUIRED)

- Distemper
- Hepatitis (canine adenovirus)
- Canine Parvovirus

These diseases are usually covered by a combination vaccine. Look for the characters "DAP" or "DHP" in your vaccination passport (for example, DHP, DAPPi, or DHPPI).

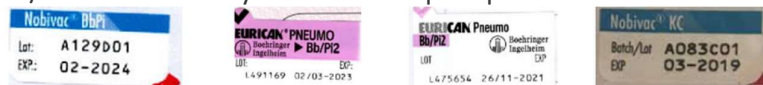

3) Leptospirosis (REQUIRED)

This vaccine is normally referred to as "L4" or "Lmulti" in your vaccination passport.

4) Bordetella/Parainfluenza (REQUIRED)

This combination vaccine is commonly referred to as "Kennel Cough". Look for the characters "Bb/Pi" or "KC" in your vaccine passport.

Parasite Prevention

- 5) We request that all dogs visiting our creche and/or boarding be on a prevention program that covers them for external parasites like fleas and ticks, as well as internal parasites like heartworms and intestinal worms.
